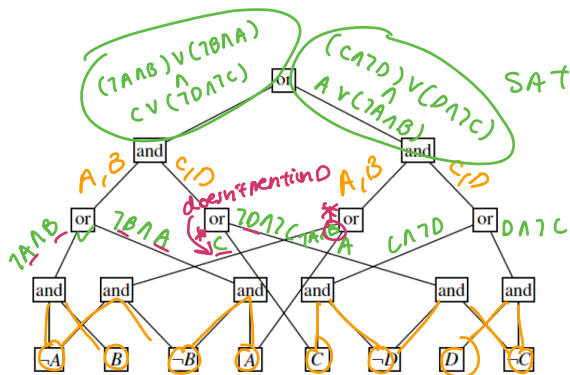

Figure 1

- decomposable ✓
- deterministic ✗
- not smooth ✗

Figure 1 is decomposable, but not deterministic nor smooth because the top OR gate has children that are SAT and some of the OR gates have children w/ a different set of variables.

Figure 2

- decomposable ✓
- deterministic ✗
- smooth ✓

Figure 2 is decomposable and smooth because all the AND gates do not share variables and all OR gates have children that mention the same variables. It is NOT deterministic because there are OR gates w/ children that are SAT.
